

A complex network graph with a central hub and many peripheral nodes. The nodes are represented by small circles, and the edges are lines connecting them. The graph is colored in blue, orange, and grey. The blue nodes form a central hub, and the orange nodes form a small cluster. The grey nodes form the majority of the peripheral structure. The graph is highly branched and complex.

A complex network graph visualization. It features a central hub node (a large grey circle) connected to several other nodes. One prominent path is highlighted in blue, starting from the bottom and moving upwards. Another path is highlighted in orange, starting from the top right and moving towards the center. The rest of the network is composed of many smaller grey nodes and edges, forming a dense, branching structure. The overall shape is roughly circular, with the central hub and the highlighted paths acting as focal points.
