

A complex network graph visualization. It features a central hub node from which many edges radiate outwards to numerous peripheral nodes. Some of these peripheral nodes are themselves hubs for smaller clusters of nodes. A specific path of three nodes is highlighted in blue, starting from a peripheral node, passing through a central hub, and ending at another peripheral node. Another path of three nodes is highlighted in orange, starting from a peripheral node and passing through two more peripheral nodes. The rest of the network is rendered in a light gray color.

A complex network graph with a central hub and many peripheral clusters. A path is highlighted in blue and orange, starting from a cluster on the left, passing through the central hub, and ending at a cluster on the right. The word "extern" is written vertically on the right side.

Sour rot
