

A complex network graph visualization. It features a central hub node (a large grey circle) from which many edges radiate outwards to numerous smaller peripheral nodes (grey circles). The graph is highly branched and dense. Two specific paths are highlighted: one in blue and one in orange. The blue path starts from a peripheral node at the bottom, moves up through several nodes, and then branches into two separate paths. The orange path starts from a peripheral node at the top right, moves left through several nodes, and then branches into two separate paths. The overall structure is a complex, interconnected web of nodes and edges, with the highlighted paths providing a clear visual focus on specific routes within the network.
